PROFESSIONAL SUMMARY

Full Stack Software Engineer skilled in React.js, Next.js, Node.js, TypeScript, PostgreSQL, and MongoDB. Built and deployed production web applications, including a JEE prediction platform serving 200+ daily active users and AI-powered SaaS products.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, SQL

Frontend: React.js, Next.js, Tailwind CSS, Zustand, Redux Toolkit, TanStack Query, Shadcn/UI

Backend: Node.js, Express.js, REST APIs, JWT Authentication, Zod

Databases: PostgreSQL, MongoDB, MySQL, Supabase, Prisma ORM, Mongoose

Developer Tools: Git, GitHub, Vercel, Railway, Render

EXPERIENCE

Full Stack Developer Intern

April 2026 – June 2026

Medit

Remote

- Developed a full-stack admin dashboard for Medit, a home healthcare platform, to manage patient bookings, service requests, preferred time slots, and booking statuses.
- Built and integrated backend APIs for creating, updating, and tracking home nursing service bookings.
- Designed responsive UI components and improved the booking management workflow for admins to view customer details, assign service requests, and track fulfillment progress.

PROJECTS

MyJEEPredictor | [Live](#) | *Next.js, TypeScript, PostgreSQL, Supabase, Tailwind CSS*

March 2026 – Present

- Built and deployed a full-stack JEE prediction platform serving 200+ daily active users
- Processed and analyzed 1,000+ JoSAA cutoff records for college predictions
- Developed 4 college prediction tools using a custom 3-tier probability algorithm
- Implemented category, gender, and state quota filtering for personalized recommendations
- Designed and optimized PostgreSQL queries using CTEs, window functions, and materialized views

AI Customer Support Agent | [Live](#) | *React, TypeScript, Node.js, Express, PostgreSQL*

June 2026

- Built a real-time AI customer support widget with persistent chat sessions
- Engineered an automated LLM fallback system to dynamically switch between 4 Gemini models
- Handled API rate limits to maintain high service availability
- Implemented domain grounding and input validation for reliable AI responses
- Constrained model outputs using database-seeded FAQs to deliver hallucination-free support

Connectly | [Live](#) | *React, Node.js, Express, MongoDB, TanStack Query, Zustand*

Jan 2026 - Feb 2026

- Built a social networking platform with real-time messaging and video calling features
- Designed and developed a multi-step onboarding flow for new users
- Built a friend request system and dynamic user discovery feed
- Improved networking and user engagement through personalized user recommendations
- Implemented secure session management using JWT authentication, httpOnly cookies, and protected routes

EDUCATION

HMRITM - GGSIPU

Bachelor of Technology in Information Technology

Delhi, India

Sept. 2022 – May 2026
